This video deck is a VHS type video recorder. For proper operation, only the VHS type cassette must be

-SPECIFICATIONS

■ General Power requirements

Power consumption Dimensions Weight

9.4 watts (When AUTO/MAN FOCUS switch is "MAN".)

■ Video Recorder Section Format

Record/playback system Video signal Tape speed Video output Mic input

Audio output Earphone output Fast forward/rewind time

E Camera Section Scanning Required minimum illumination Camera device

124 (W) x 205(H) x 368(D) mm

2 video record/playback heads PAL colour & CCIR monochrome signals 625 lines 23.39 mm/sec. 1.0 Vp·p, 75 ohm

-68 dBs, more than 1K ohm -8 dBs. less than 1K ohm -26 dBs, (8 ohms terminal) Less than 8 minutes with E-180 cassette

625 lines/50 fields/25 frames

1/2" C.C.D

- CAUTIONS ON LITHIUM BATTERY REPLACEMENT

Replace the lithium battery correctly,otherwise it may explode. Do not replace the battery with one other than those specified by manufacturer(the same model or equivalent).

SAFETY PRECAUTIONS

- The following precautions should be observed when servicing. 1. Since many parts in the unit have special safety-related characteristics, always use genuine Hitachi replacement parts. Especially critical parts in the power circuit block should not be replaced with other makers'. Critical parts are marked with 🛕 in the schematic diagram.
- 2. Before returning a repaired unit to the customer, the service technician must thoroughly test the unit to ascertain that it is completely safety operate without danger of electrical shock.

SPECIFICATIONS AND PARTS ARE SUBJECT TO CHANGE FOR IMPROVEMENT

CHAPTER 2 DISASSEMBLY

1. CASE REMOVAL

- 1-1. Left Case
 1. Turn the EVF neck in the direction of
- arrow (A). (See Fig. 2-1)

 2. Remove nine (9) screws holding the
- left case.

 3. Open the left case in the direction of arrow (B).

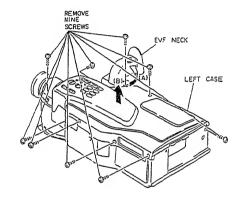

Fig. 2-1

1-2. Electronic Viewfinder (EVF)

ORDER	FOR REMOVING PARTS	ITEM No.
1444		
o. Left	Case	1-1

- 1. Move the EVF in the direction of arrow
- (A). (See Fig. 2-2)

 2. While pulling the EVF shoe spring (1) in the direction of arrow (B), remove the EVF in the direction of arrow (A).
- 3. Remove one (1) screw and move the camera chassis in the direction of arrow (C) to release the EVF cable.
- (See Fig. 2-3)
 4. Release two (2) tabs and open the main circuit board in the direction of arrow (D).
- 5. Disconnect connector CN401 on the main circuit board.
 Note: When reinstalling the EVF, first attach the EVF shoe spring (1) to the EVF shoe.

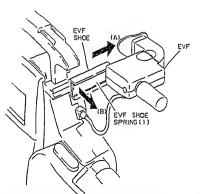

Fig. 2-2

1. Release two (2) tabs and open the main

circuit board in the direction of the arrow. (See Fig. 2-9)

- 2. Disconnect two (2) connectors (CN905, CN910) holding the camera section and
- VTR section. (See Fig. 2-10)
 3. Disconnect five (5) connectors (CN402, CN403, CN602, CN904, CN912).
- 4. Disconnect three (3) flat cables (CN201, CN601, CN903).
- 5. Release two (2) tabs holding the main
- circuit board. (See Fig. 2-9)
 6. Remove one (1) screw holding the ground cable. (See Fig. 2-11)

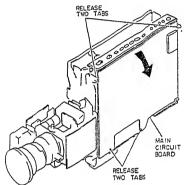

Fig. 2-9

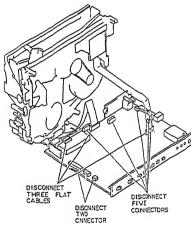

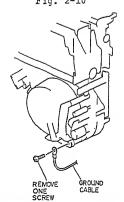

Fig. 2-10

2-2. Auto Focus Circuit Board

- 1. Release three (3) tabs holding the auto focus circuit board. (See Fig. 2-12)
- 2. Disconnect seven (7) connectors (CNOLAF, CNO2AF, CNO3AF, CNO4AF CNO5AF, CNO6AF, CNO7AF) on the auto focus circuit board.

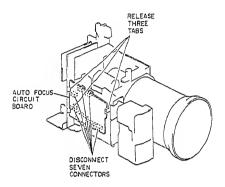

Fig. 2-12

2-3. Control Circuit Board

- 1. Disconnect two (2) connectors (CN601, CN910). (See Fig. 2-13)
- 2. Release three (3) tabs holding the control circuit board.

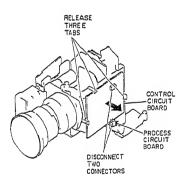

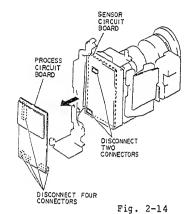

Fig. 2-13

2-4. Process Circuit Board

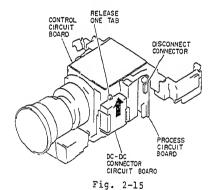

- 1. Pull the process circuit board in the direction of arrow disconnect two (2) connectors (CN101, CN102) between the sensor circuit board. (See Fig. 2-14)
- 2. Disconnect four (4) connectors (CN203, CN204, CN205, CN206) on the process circuit board.

2-5. DC-DC Converter

- 1. Disconnect connector CN205 from the
- process circuit board. (See Fig. 2-15)

 2. Release one (1) tab and pull out the DC-DC converter circuit board form its holder in the direction of arrow.

2-6. Sensor Circuit Board

ORDER FOR REMOVING PARTS	ITEM No.
• Process Circuit Board	2-4

- 1. Remove one (1) screw holding the sensor shield cover. (See Fig. 2-16)
- 2. Remove three (3) screws holding the sensor circuit board.
- 3. Pull out the sensor circuit board in the direction of arrow.

- 2-7. Back-up Circuit Board and Batt. Terminal Circuit Board
- 1. Unsolder connector CN902 on the batt. terminal circuit board. (See Fig. 2-17)
- 2. Remove one (1) screw holding the fuse cover. (See Fig. 2-18)
- 3. Open the covers back-up battery and fuse remove them in the direction of arrow.
- 4. Remove the back-up circuit board in the direction of arrow.
- 5. Disconnect connector CN906 on the back-up circuit board.

• Dew Sensor	35

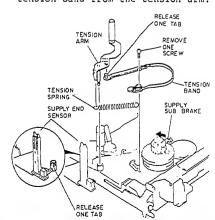

- Remove two (2) screws holding the pressure roller holder. (See Fig. 2-68)
- Pull out the pressure roller assembly from the chassis.

3-12. Tension Arm and Tension Band

ORDER FOR REMOVING PARTS	ITEM No.
 Cassette Holder and Supply Sensor Circuit Board 	3-1

- 1. Remove one (1) tab of the supply end sensor. (See Fig. 2-69)
- 2. Release the tension spring.
- Remove one (1) screw holding the tension band.
- Move the supply sub brake in the direction of the arrow.
- Remove the tension arm and tension band from the chasis.
- Release one (1) tab and remove the tension band from the tension arm.

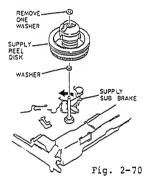

3-13. Supply Reel Disk

ORDER FOR REMOVING PARTS	I.TEM No.
 Cassette Holder and Supply Sensor Circuit Board 	3-1
 Tension Arm and Tension Band 	3-12

- 1. Remove one (1) washer holding the supply reel disk. (See Fig. 2-70)

 2. Move the supply sub brake in the
- direction of the arrow.
- 3. Pull out the supply reel disk from the chassis.
- Note: Take case not to lose the washer in the lower section. Adjust as follows after installing the supply reel disk.
 - * CHAPTER 3
 - 2-1. REEL DISK HEIGHT ADJUSTMENT

3-14. Take-up Reel Disk

ORDER FOR REMOVING PARTS	ITEM No.
 Cassette Holder and Supply Sensor Circuit Board 	3-1

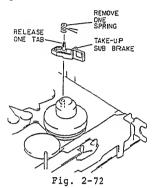

- 1. Remove one (1) washer holding the take-up reel disk. (See Fig. 2-71)
- 2. Pull out the take-up reel disk from the chassis.
- Note: Take case not to lose the washer in the lower section. Adjust as follows after installing the take-up reel disk.
 - * CHAPTER 3

3-15. Take-up Sub Brake

ORDER FOR REMOVING PARTS	ITEM No
 Cassette Holder and Supply Sensor Circuit Board 	3-1

- 1. Remove the spring between the chassis and take-up sub brake. (See Fig. 2-72)
- 2. Relase one (1) tab and pull out the take-up sub brake from the chassis.

3-16. Supply Guide Pole

- 1. Turn the upper section of the supply guide pole using the hexagonal box wrench (5.0mm) to remove the supply
- guide pole. (See Fig. 2-73) Note: Adjust as follows after installing the supply guide pole.
 - * CHAPTER 3 2-3. SUPPLY AND TAKE-UP GUIDE POLE HEIGHT ADJUSTMENT

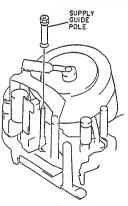

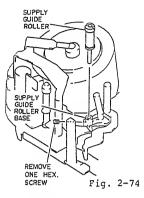

Fig. 2-73

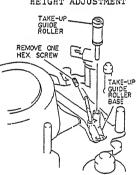

3-17. Supply Guide Roller

- Remove one (1) hex screw holding the supply guide roller. (See Fig. 2-74)
- 2. Turn the upper section of the supply guide roller using a flat-head driver to remove the supply guide roller from the supply guide roller base.
- Note: Adjust as follows after installing the supply guide roller.
 - * CHAPTER 3
 - 2-4. SUPPLY/TAKE-UP GUIDE ROLLER HEIGHT ADJUSTMENT

3-18. Take-up Guide Roller

- 1. Remove one (1) hex screw holding the take-up guide roller. (See Fig. 2-75)
- 2. Turn the upper section of the take-up quide roller using a flat-head driver to remove the take-up guide roller from the take-up guide roller base.
 Note: Adjust as follows after installing
 - the take-up guide roller.

JIGS AND TAPES FOR ADJUSTMENT

CHAPTER 3 MECHANICAL ADJUSTMENT

1. TAPE LOADING SYSTEM COMPONENTS ADJUSTMENT

1-1. LOADING CAM GEARS (SUPPLY/TAKE-UP) ADJUSTMENT (Fig. 3-1)

Always perform this adjustment when reinstalling the loading cam gears. Be sure to check this adjustment when reinstalling the loading gear.

 Align mark (A) on the supply loading cam gear and mark (B) on the take-up loading cam gear when reinstalling them. Check that the supply and takeup guide roller bases are in the unloading state.

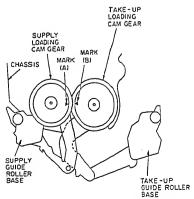

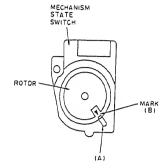

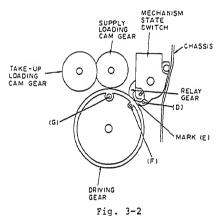

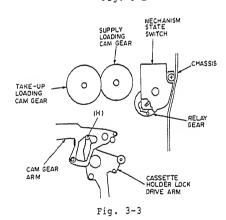

Fig. 3-1

- 1-2. MECHANISM STATE SWITCH AND DRIVING GEAR ADJUSTMENT (Figs. 3-2, 3-3)
 Be sure to perform this adjustment when reinstalling the mechanism state switch and driving gear.
- Align section (A) of the mechanism state switch and section (B) of the rotor. (See Fig. 3-2)
- Align hole (D) in the relay gear and hole in the chassis.
- 3. Move the cassette holder lock drive arm so that the pin comes into connect with section (H) of the cam gear arm. Reinstall the driving gear following the procedure below in this condition.
- (See Fig. 3-3)
 4. Install the driving gear into the chassis so mark (E) on the relay gear and hole (F) in the driving gear are aligned. Check that hole (G) of the driving gear and the hole in the chassis overlap each other at this time. (See Fig. 3-2)
- 5. Install the mechanism state switch in the condition set in step 1 into the chassis. Check that mark (C) on the mechanism state switch, mark (E) on the relay gear and hole (F) in the driving gear are lined up in straight line.

1-3. LOADING GEAR AND TENSION POLE DRIVE ARM ADJUSTMENT (Fig. 3-4)

Be sure to perform this adjustment when reinstalling the loading gear and tension pole drive arm. Perform this adjustment after checking that the loading cam gears are installed correctly and are in the unloading state.

- Reinstall the loading gear so its mark (A) and mark (B) on the supply loading cam gear are aligned.
- Reinstall the tension pole drive arm so mark (D) on the relay gear and hole (C) in the tension pole drive arm are aligned.

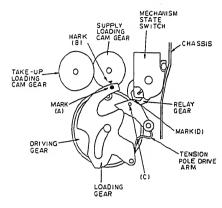

Fig. 3-4

2. TAPE TRANSPORT SYSTEM COMPONENTS CHECK/ADJUSTMENT

The tape transport system is the path from the supply reel to the take-up reel via the video heads. The tape transport components, especially the components which come into direct contact with the tape, should be kept clean without damage, dust and oil, etc. adhering to the contact surfaces. The tape transport system is adjusted before shipment from the factory, so when any transport components are replaced, the transport system is stabilized by correctly adjusting the new components.

2-1. REEL DISK HEIGHT ADJUSTMENT (Fig. 3-5)

- Remove the cassette lid, right case and mount the master plane to the cassette holder.
- Place a reel disk height jig on the master plane and fit it to the reel disk.
- Check that the top of the reel disk is positioned between sections A and B of the reel disk height jig.
- When the top of the reel disk is not positioned between section A and B, adjust the number of the spacers (2 types: 0.25 mm and 0.5 mm thick) at the bottom of the reel disk.

HEIGHT REFERENCE PLATE

Fig. 3-5

CHASSIS

2-2. TENSION POLE POSITION/TENSION ADJUSTMENT (Fig. 3-6)

<u>Position Adjustment</u> (Fig. 3-6)1. Set the tension spring to position "C" on the spring holder.

 Cover up the supply end sensor photocell located midway on the left side of the tape mechanism.

3. Place instrument in the "PLAY" mode.

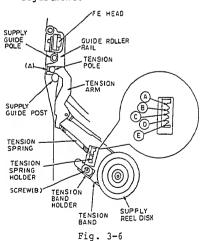

4. After loading is completed, loosen screw (B) holding the tension band holder and adjust the position of the tension band holder so the tension pole is in section (A) (concave) of the guide roller rail.

 After adjustment is completed, tighten screw (B).

Tension Adjustment (Fig. 3-6)

- Load the instrument with the back tension meter.
- Place the instrument in the "PLAY" mode.
- 3. Read the scale on the supply.
- 4. This reading should be between 19 and 26.
- 5. Move the tension arm spring to the position "A" or "B" on the spring holder when the tension adjustment tape reads 27 or higher, and to the position "D" or "E" on the spring holder when it is 18 or lower, and adjust the back tension for a nominal reading of 19-26 on the scale.
- Recheck the tension arm position when the back tension is changed greatly (5 or more).

Note: The instrument must be in a horizontal position for this adjustment.

2-3. SUPPLY/TAKE-UP GUIDE POLE HEIGHT ADJUSTMENT (Fig. 3-7)

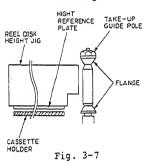

Take-up Guide Pole Height Adjustment

 Remove the cassette lid, right case and mount the master plane to the cassette holder.

Place a reel disk height jig on the master plane and fit it to the guide pole. Adjust the nut on the top of the guide pole so that the upper flange is aligned with the top edge of the height jig.

Supply Guide Pole Height Adjustment

 Run the tape and adjust the height of the take-up guide pole so that the bottom of the tape is aligned with the top of the lower flange.

- 2-4. SUPPLY/TAKE-UP GUIDE ROLLER HEIGHT ADJUSTMENT (Figs. 3-8, 3-9)
- Remove the cassette lid, right case and mount the master plane to the cassette holder.
- Place a reel disk height jig on the master plane and fit it to the supply quide roller.
- 3. Loosen the screw holding the supply guide roller and adjust its height so the bottom of the roller's upper flange and the top of the reel height jigs are aligned. Adjust the take-up guide roller in the same way.
- After adjustment is completed, tighten the screw holding the guide roller.
- Run the tape and check that the tape does not curl and ride over, and then perform the electrical adjustment.
- Connect the oscilloscope to TP203 on the main board.
- 7. Trigger the oscilloscope at SW 25Hz. (Use TP206 on the main circuit board.)
- Playback the colour bar signal on alignment tape (MH-2) and press the two (2) TRACKING control buttons (up and down) simultaneously.
- Check that the FM waveform is flat.
 If the FM envelope is not flat, fine adjust the height of the supply and take-up guide rollers to flatten the
- FM envelope.
 11. Tighten the fixing screw.

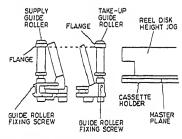

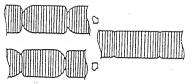

Fig. 3-8

Turn guide roller height ajustment screw a little of a time to fratten waveform.

Fig. 3-9

2-5. A/C HEAD ADJUSTMENT

(Figs. 3-10, 3-11, 3-12)
Perform the height, tilt and azimuth adjustments repeatedly to determine the A/C head installation position, then adjust the X value.
Detailed adjustment below is the procedure when the A/C head is replaced; be sure to do precise adjustment after rough adjustment.

Rough Adjustment (Fig. 3-10)

 Remove the cassette lid, right case and mount the master plane to the cassette holder.

 Adjust NUT (A), AZIMUTH SCREW (B), TILT HEX. SCREW (C) and SCREW (D) so the height difference between the height reference plate and A/C head plate is approx. 1.78 mm and A/C head base and A/C head plate are parallel.

Precise Adjustment (Figs. 3-10, 3-11)
3. Connect the oscilloscope to audio output (AV OUT).

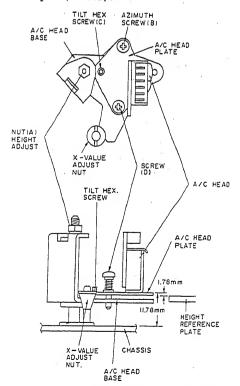

Fig. 3-10

 Playback a l kHz audio signal (colour bar signal) on alignment tape (MH-2).

5. Adjust AZIMUTH SCREW (B) and TILT HEX. SCREW (C) for maximum output.

X-Value Adjustment (Figs. 3-10, 3-12)
6. Connect the oscilloscope to TP203 on the main board.

 Trigger the oscilloscope at SW 25Hz. (Use TP206 on the main board)

8. Press the two (2) TRACKING control buttons (up and down) simultaneously.

 Playback the colour bar signal on alignment tape (MH-2).

10. Adjust the X-value adjustment nut so the signal at TP203 (FM envelope) is maximum. Press the two (2) TRACKING control buttons (up and down) and check that the FM envelope becomes as shown in Fig. 3-12.

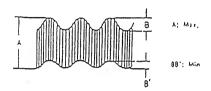

Fig. 3-11

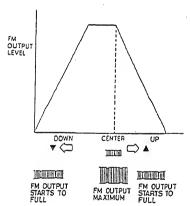

Fig. 3-12

2-6. ADJUSTMENT AFTER REPLACING THE

CYLINDER (Fig. 3-13)
When the cylinder is replaced, the
relative height with respect to the guide
rollers or the X-value, etc. drifts (this
drift is small when the cylinder is
replaced correctly). Therefore, it is
necessary to readjust the tape transport
system and servo system. Perform checks
and adjustments by the following steps.

 Load a blank tape and play it. Check that no curling or creasing occurs around the guide rollers. If curling or creasing occurs, fine adjust the height of the guide rollers.

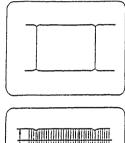

Confirm that the FM envelope is flat and level fluctuations are minimum. If it cannot be confirmed, adjust the height of the guide rollers. See the next item for perform these checks adjustment.

 Check or adjust the head switching point. See CHAPTER 4 for how to adjust this item.

4. Confirm that the X-value adjustment is correct (do not adjust the X-value even if it is not correct). If it can be confirmed, proceed to step 7, and if it cannot be confirmed, proceed to step 5.

5. Check or adjust the tracking preset. See CHAPTER 4 for how to adjust this

6. Adjust the X-value.

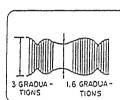

Fig. 3-13

 Adjust the record chroma level. See CHAPTER 4 for how to adjust this item.

Check Flatness and Level Fluctuations of the FM Output (Fig. 3-13)

1. Connect the oscilloscope to TP203 on the main circuit board.

2. Trigger the oscilloscope at SW 25Hz. (Use TP206 on the main circuit board.)

3. Press the two (2) TRACKING control buttons (up and down) simultaneously.

 Fine adjust the voltage level range of the oscilloscope and set the FM output to 4 graduations.

5. Press either TRACKING control button (up and down) to set the FM output to the maximum 3 graduations.

6. Check that the minimum amplitude is more than 2.0 graduations.

3. TENSION AND TOROUE CHECKS (Fig. 3-14)

It is necessary to check the tension, torque and compression strength in the tape take-up section and moving section to smoothen the tape transport and to satisfy the basic performance of the VTR. When the tape transport is not smooth or the tape speed is abnormal, detect the faulty section by this checking, and then check again after replacing the faulty parts with normal ones to Complete the work.

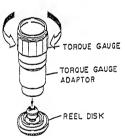

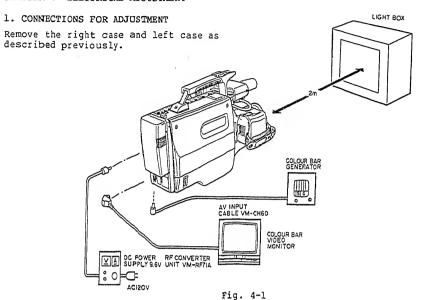

Fig. 3-14

Item	VTR Operation	Measured Reel	Measurement Value	Remarks
Main brake	STOP	Supply	140 g.cm or more	Fig. 3-14

CHAPTER 4 ELECTRICAL ADJUSTMENT

2. CAMERA SECTION ADJUSTMENT

2-1. CIRCUIT BOARD LOCATIONS AND SERVICING POSITION

- 1. Autofocus Circuit Board
- 2. Sensor Circuit Board
- 3. DC-DC Converter
- 4. Control Circuit Board
- 5. Process Circuit Board
- A. 10-Pin Extension Cable (Part No. 7099382). Connect the sensor circuit board and process circuit board.
- B. 14-Fin Extension Cable
 (Part No. 7099383).
 Connect the sensor circuit board and process circuit board.

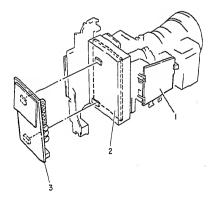

Fig. 4-2

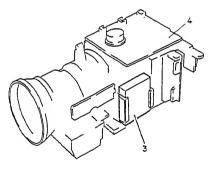

Fig. 4-3

2-2. TEST EQUIPMENT AND CHARTS NECESSARY FOR ADJUSTMENT

Test Equipment Oscilloscope (dual trace) (Vectorscope) Digital Voltmeter (DVM) Frequency Counter Colour Video Monitor

Charts, etc.
Gray Scale Chart
Colour Bar Chart
Resolution Chart
Backfocus Adjustment Chart
Light Box (3100°K)
DC Power Supply (9.6 V)
DC Power Supply (3.3 V)
Backfocus Adjustment Driver
Light Balancing Filter (C12)

2-3. ADJUSTMENT CONDITIONS

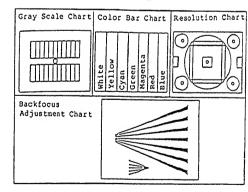

- Check that the VTR section has been adjusted correctly before adjusting the camera section.
- Connect this unit, a power supply and a colour video monitor as shown in Fig. 4-1.
- 3) Place the chart (light box) 2 m away from the camera (lens surface) when otherwise not specified.
- Point the camera at the chart to fill the video period when otherwise not specified.
- 5) Use the 10:1 probe of the oscilloscope when otherwise not specified.
- 6) When "Trigger the oscilloscope at H. rate." is specified, set the time base of the oscilloscope to 10 µs/div.
- 7) When using VIDEO OUT (in the AV output jack) to perform adjustment, be sure to terminate the AV output jack with 75 ohm.

2-4. PRESET POSITIONS OF SWITCHES AND CONTROLS DURING ADJUSTMENT

OPERATE	. "ON"
CAM./VIDEO switch	"CAM." position
SHUTTER switch	. "MAN" position
Shutter Speed	
NEGA/POSI switch	. "POSI" position
IRIS control	"AUTO (Centre)"
	position
FOCUS switch	"MAN" position
TITLE	"OFF"

2-5. LIST OF CHARTS FOR CAMERA ADJUSTMENT

Table 4-1

2-6. CAMERA ADJUSTMENT

1) Subcarrier Frequency Adjustment (Figs. 4-51, 4-52)
This adjustment set for frequency adjustment of subcarrier.

Test Point: TP201-4 Process
Adjust: CT101 (Fo ADJ) Sensor
Observe: Frequency Counter

- 1. Connect the frequency counter to TP201-4.
- 2. Adjust CT101 for 9.656250MHz + 20Hz.

Note: Be careful when applying an adjustment driver to CT101 because the stray capacitance of the driver may vary the frequency.

2) Subcarrier Lock Voltage Adjustment (Fig. 4-52)

This adjustments sets the subcarrier lock voltage to the specified value.

Test Point: TP201-1 Process
Adjust:
CT201 (SUBCARRIER LOCK VOLT.) Process
(IC203)

Observe: DVM

- 1. Connect the DVM to TP201-1.
- 2. Adjust CT201 (on the IC203) for 2.5V + 0.3V.

Note: Be careful when appling an adjustment driver to CT201 because the stray capacitance of the driver may vary the voltage.

Use non-metalic adjustment tool.

3) Backfocus Adjustment (Fig. 4-4) The propose of this adjustment is to ensure proper focus tracking throughout the zoom range.

Adjust: BACKFOCUS ADJUSTMENT POINT (BACKFOCUS LENS)
Observe: Colour Video Monitor

Position the camera section two (2)
meters from the backfocus adjustment
chart and illuminate the object with
approximately 100 lux.

 Set the zoom to wide-angle end and set the index on the focus ring to two (2) meters.

- Loosen the relay lens retaining screw.
 Insert the backfocus adjustment driver into the backfocus adjustment hole and turn it to the left and right to
- optimize the focus.

 5. Set the zoom to telephoto end and check that the chart is in focus. If it is not focused, set the zoom to
- wide-angle and readjust step 4.

 6. Adjust so that the chart is approximately in focus at both the wide-angle and telephoto ends with the focus ring set to two (2) meters.

Note: After adjustment is completed, tighten the relay lens retaining screw and fix it with locking paint.

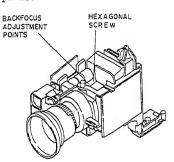

Fig. 4-4

4) Sensor Sub Voltage Adjustment (Figs. 4-5, 4-51) This adjustment prevents vertical blooming.

Test Point: VIDEO OUT (AV output jack) Adjust: RT101 (SENSOR SUB VOLTAGE) Sensor Colour Video Monitor Observe:

1. Point the camera at a 40 W to 60 W incandescent lamp one (1) meter away. (See Fig. 4-5)

2. Turn RT101 fully counterclockwise and then turn it gradually clockwise to adjust so that the band of blooming appearing in the vertical direction of the monitor screen just disappears.

Note: Stop RT101 Where blooming disappears and careful not to turn it too far.

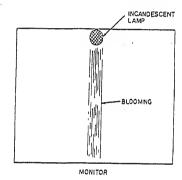

Fig. 4-5

5) Luma Setup Adjustment (Figs. 4-6, 4-52)This adjustment sets the brightness of the picture.

Test Point: VIDEO OUT (AV output jack) RM201-4 (LUMA SETUP) Process Observe: Oscilloscope

1. Cap the lens.

2. Set the IRIS control to CLOSE position.

3. Connect the oscilloscope to video out. 4. Trigger the oscilloscope at H. rate. (Use TP201-3 (HD) on the process

circuit board.) 5. Adjust RM201-4 for 35mV + 15mV (5IRE + 2IRE) from the blanking level to the centre of the waveform.

6. Set the IRIS control to AUTO position.

Fig. 4-6

6) AIC Level Adjustment (Figs. 4-7, 4-52) This adjustment sets the balance point of the auto iris control.

Test Point:

VIDEO OUT (AV output jack) Adjust RM201-5 (AIC) Process Observe: Oscilloscope

1. Aim the camera at the gray scale chart.

2. Connect the oscilloscope to video out. 3. Trigger the oscilloscope at H. rate.

(Use TP201-3 (HD) on the process circuit board.)
4. Adjust RM201-5 for 700mVp-p + 15mV

(98IRE + 2IRE) from the blanking level to the centre of the white level on the gray scale.

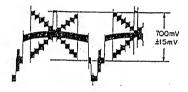

Fig. 4-7

7) White Balance Hold Voltage Setting (Fig. 4-52)

Test Point: TP201-5 Process TP201-11 (GND) Process Observe:

1. Cap the lens.

2. Connect the DVM and DC power supply to TP201-5.

3. Apply DC3.3V ± 0.05V to TP201-5.
4. Connect TP201-5 to ground (TP201-11) and remove ground (TP201-11) connection from TP201-5.

Note: White Balance Hold Voltage Setting is required prior to performing R-Y, B-Y Setup Adjustment and White Balance Adjustment.

8) R-Y, B-Y Setup Adjustment (Figs. 4-8, 4-52)This adjustment sets the proper black balance of the picture.

Test Point: VIDEO OUT (AV output jack) Adjust:

RM201-2: (B-Y SETUP) RM201-3 (R-Y SETUP) Observe: Oscilloscope Vectorscope

Adjustment using the oscilloscope (Fig. 4-8)

1. Cap the lens.

2. Connect the oscilloscope to video out.

Process

Process

3. Trigger the oscilloscope at H. rate. (Use TP201-3 (HD) on the process

circuit board.)
4. Adjust RM201-2 and RM201-3 for minimum carrier in the waveform.

Adjustment using the vectorscope See Page 4-6.

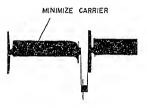

Fig. 4-8

9) White Balance Adjustment (Figs. 4-9, 4-52)This procedure sets the correct red and blue signal levels for proper white balance circuit operation.

Test Point:

VIDEO OUT (AV output jack) RT201 (RED GAIN) Adjust: Process RT202 (BLU GAIN) Process Observe: Oscilloscope Vectorscope

Adjustment using the oscilloscope (Fig. 4-9)

1. Attach the light balancing filter C12 over the lens.

2. Aim the camera at the gray scale chart.

3. Connect the oscilloscope to video out. 4. Trigger the oscilloscope at H. rate. (Use TP201-3 (HD) on the process circuit board.)

5. Adjust RT201 and RT202 to minimize the carriers at each step of the waveform.

Adjustment using the vectorscope See Page 4-6.

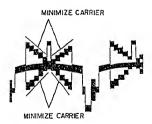

Fig. 4-9

10) Chroma Level Adjustment (Figs. 4-10, 4-52) This adjustment sets the chroma level. Test Point:

VIDEO OUT (AV output jack)

Adjust:

RT'203 (CHROMA LEVEL) Oscilloscope Observe: Vectorscope

Process

Adjustment using the oscilloscope

(Fig. 4-10) 1. Remove the DC power supply (3.3V) from TP201-5.

2. Attach the light balancing filter C10 (C8 + C2) over the lens.

3. Aim the camera at the colour chart.

4. Connect the oscilloscope to video out. 5. Trigger the oscilloscope at H. rate.

(Use TP201-3 (HD) on the process circuit board.)

6. Adjust RT203 so that the red level of the waveform is 600mV + 50mV (84 IRE + 7 IRE). Check that the tint of the chart and the tint of the picture are approximately matched at this time.

Adjustment using the vectorscope See Page 4-6

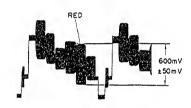

Fig. 4-10

2-7. ELECTRONIC VIEWFINDER (EVF) ADJUSTMENT

1) Deflection Yoke Position Adjustment (Fig. 4-11) This adjustment procedure eliminates picture tilt on the EVF display.

Deflection yoke Adjust: Observe: EVF Display

1. Align the camera with the resolution chart making sure that both the camera and the chart are on the same plane.

2. Loosen the screw holding the deflection yoke.

3. Turn the deflection yoke so that the EVF picture (chart) is horizontal, matching the edges of the CRT.

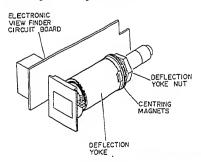

Fig. 4-11

Note: After adjustment is completed, tighten the deflection yoke retaining screw.

2) EVF Centring Adjustment (Fig. 4-11) This adjustment centres the image observed by the camera in the EVF display.

Adjust: Centring Magnets
Observe: EVF Display

- Aim the camera at the resolution chart and align the centre of the chart with the centre of the camera lens.
- Remove the locking paint from the centreing magnets.
- Adjust the centring magnets until the centre of the picture viewed by the camera is positioned in the centre of the EVF Display.
- Note: After adjustment is completed, fix the centring magnets with lock paint.
- 3) EVF Vertical Size Adjustment (Fig. 4-53)

This adjustment determines the vertical size of the image appearing in the EVF display.

Adjust: RT802 (V. SIZE) EVF Observe: EVF Display

- Aim the camera at the resolution chart, and line up the reference arrow head with the edge of the raster in the EVF.
- Adjust RT802 so that the top and bottom edges of the Chart match the top and edges of the CRT.
- 4) EVF Brightness Adjustment (Fig. 4-53) This adjustment sets the brightness of the picture in the EVF display.

Adjust: RT805 (BRIGHT) EVF Observe: EVF Display

- Aim the camera at the gray scale chart.
- 2. Adjust RT805 to optimize the EVF picture.
- 5) EVF Focus Adjustment (Fig. 4-53) This control adjusts for optimum focus of the electronic viewfinder picture.

Adjust: RT803 (FOCUS) EVEODbserve: EVF Display

- Aim the camera at the resolution chart.
- Adjust RT803 so that the EVF picture is clear.

2-8. AUTOFOCUS ADJUSTMENT

 Sensor Position Adjustment (Fig. 4-12)

Adjust: Sensor Adjustment Screw Observe: Colour Video Monitor

- Position the camera section two (2) meters from the backfocus adjustment chart and illuminate the object with approximately 100 lux.
- 2. Remove the autofocus adjustment cap.
- Set the index on the focus ring to two (2) meters. Check that the chart is in focus. If it is not in focus, readjust the backfocus.
- 4. Set the zoom to telephoto end.
- 5. Set the FOCUS switch to AUTO position.
- 6. Operate the autofocus from the telephoto end to the wide-angle end and check that the chart is in focus with the index at two (2) meters.
- 7. If the chart is not in focus, turn the Sensor Adjustment Screw so the index on the focus ring is two (2) meters.

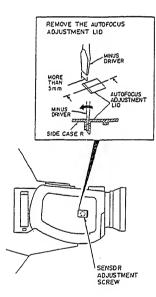

Fig. 4-12

2-9. ADJUSTMENT USING THE VECTORSCOPE

Note 1: Use the video output jack as the test point for all adjustments. Note 2: Terminate the vectorscope with 75 ohm or connect the vectorscope to the video output jack terminated with 75 ohm.

ITEM No.	ADJUSTMENT NAME	SUBJECT	ADJUSTMENT POINT	PROCEDURE	Fig.
9)	R-Y, B-Y Setup Adjustment	Lens Cap	RM201-2 RM201-3	1. Cap the lens. 2. Apply DC 3.3V (± 0.05V) to TP201-5. (See ITEM 7)) 3. Adjust RM201-2 and RM201-3 so that the bright spot is positioned at the centre.	4-13
10)	White Balance Adjustment	Gray Scale	RT201 RT202	1. Apply DC 3.3V (± 0.05V) to TP201-5. (See ITEM 7)) 2. Attch the light balancing filter Cl2 over the lens. 3. Adjust RT201 and RT202 so that the bright spot is positioned at the centre.	4-13
12)	Chroma Level Adjustment	Color Bar	RT203	 Attch the light balancing filter C10 (C2 + C8) over the lens. Adjust RT203 so that the red vector is equal to more than 230% ± 5% when compared to the burst level. 	4-14

3-2. TEST EQUIPMENT AND ALIGNMENT TAPES NECESSARY FOR ADJUSTMENT

- · Test Equipment Oscilloscope (dual trace) Digital Voltmeter (DVM) Millivoltmeter Frequency Counter
- Colour Video Monitor · Alignment Tape and Charts, etc. PAL Alignment Tape (MH-2) Blank Tape DC Power Supply (9.6V)

3-3. ADJUSTMENT CONDITIONS

- 1) Connect this unit, a power supply and a colour video monitor as shown in Fig. 4-1.
- 2) Before adjusting the VTR section, check that the camera section has been adjusted correctly.
- 3) Use the 10:1 probe of the oscilloscope when otherwise not specified.
- 4) When "REC" mode is specified, set the CAM./VIDEO switch to CAM. position and press the REC start stop button on the autofocus circuit board or STILL button on the function switchs.

5) When "TRACKING PRESET" position is specified, press the two (2) TRACKING control buttons (up and down) simultaneously.

3-4. PRESET POSITIONS OF SWITCHES AND CONTROLS DURING ADJUSTMENT

OPERATE "ON" CAM./VIDEO switch "VCR" position TRACKING "Preset" position

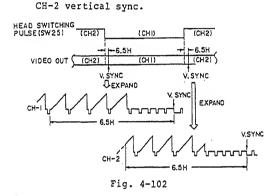

3-5. SERVO SECTION

1) Head Switching Point Adjustment . (Figs. 4-102, 4-151) The pulse generator shifter determines the video head switching point during playback. Misadjustment of pulse generator shifter may cause head switching noise in the picture and/or vertical instability.

Test Point:

VIDEO OUT (AV output jack) TP206 (SW 25Hz) Main RT601 (PG SHIFTER) Main Adjust: Observe: Oscilloscope

- 1. Set the VIDEO/CAM switch to the VIDEO position.
- 2. Load the instrument with a PAL alignment tape (MH-2) and play it back the colour bar signal.
- 3. Connect the oscilloscope to video out. $(0.5\text{V}/50\mu\text{sec.cm})$. 4. Trigger the oscilloscope at SW 25Hz.
- 5. Set the oscilloscope to (-) slope and adjust RT601 so that the trailing edge of the SW 25Hz signal is placed 6.5H ± 0.5H (horizontal) lines before
- the start of CH-1 vertical sync. 6. Set the oscilloscope to (+) slope and confirm the leading edge of the SW 25Hz signal is 6.5H + 0.5H(horizontal) lines before the start of

3-6. LUMINANCE/CHROMA SECTION

1) Record Chroma Level Adjustment (Figs. 4-103, 4-151) Optimum record colour level is regulated by this adjustment. If the record chroma level is too high, diamond beats can be seen in the screen. If the levels is too low, the colour is degraded.

Test Point: TP202 Main TP206 (SW 25Hz) Main Adjust:

RT202 (REC CHROMA LEVEL) Main Observe: Oscilloscope

1. Apply a PAL colour bar siganl to AV IN

- jack. 2. Adjust the input colour bar signal level for lVp-p measured at the video input jack.
- 3. Connect the oscilloscope to TP202. (Use the shield cover on the main circuit board of the preamp section as ground.) (50mV/2msec.cm)
 4. Trigger the oscilloscope at SW 25Hz.
- 5. Load the instrument with a blank tape.
- 6. Place the instrument in the "REC" mode.
- 7. Adjust RT202 so that the record chroma level is 120mV + 5mV.

Fig. 4-103

2) 1H Delay Line Output Level Adjustment (Figs. 4-104, 4-151)
This adjustment makes the input and output levels of the lH delay Line the same. If this adjustment is incomplete, switching noise is conspicuous when dropout is compensated.

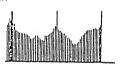

Test Point: IC202-5 Main. TP206 (SW 25H2) Main

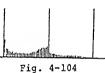

Adjust: RT201

Main

(1H DELAY LINE OUTPUT LEVEL) Observe: Oscilloscope

- 1. Load the instrument with an PAL alignment tape (MH-2) and play it back the colour bar signal.
- 2. Connect the oscilloscope to IC202-5.
- (0.2V/5msec.cm).
 Trigger the oscilloscope at SW 25Hz. (Use TP206 on the main circuit board.)
- 4. Adjust RT201 to minimize noise at the waveform.

3-7. AUDIO SECTION

1) Audio Bias Level Adjustment (Fig. 4-151) This adjustment optimizes the audio record bias. When the audio record bias is too low, high frequencies are increased resulting in distortion. When the level is too high, high frequencies are attenuated.

Test Point: TP401 Main TP402 (GND) Main

Adjust: RT401 (AUDIO BIAS LEVEL) Main Obser**v**e: Millivoltmeter

Note: Perform this adjustment without applying an audio signal.

- 1. Connect the millivoltmeter to TP401. (Use TP402 as ground.)
- 2. Load the instrument with a blank tape. 3. Place the instrument in the "REC"
- mode. 4. Adjust RT401 for 2.4mV + 0.1mV.

2-10. ADJUSTMENT COMPONENTS LOCATIONS

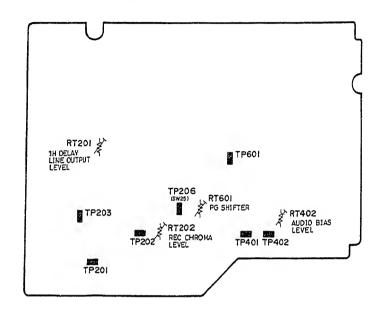

Fig. 4-151 Main Circuit Board (Solder Side)

CHAPTER 5 SCHEMATIC DIAGRAMS AND CIRCUIT BOARD DIAGRAMS

WHEN USING THIS SERVICE REFERENCE MATERIAL

- 1. Markings in Schematic and Circuit Board Diagrams
- Parts with marks * m * attached to circuit numbers in the schematic and circuit board diagrams are discrete components.
 Parts with marks (2) in the circuit board diagrams are leadless jumpers.

2. How to Read Abbreviations

Values, dielectric resistances (power capacitances), tolerances, grades of resistors (excluding variable resistors, etc.) and capacitors are indicated in the schematic diagrams using abbreviations. Collate these abbreviations and the following tables for reading abbreviations to replace parts correctly.

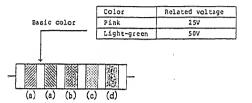

2-1. Resistors

	Value	No indication ohm Kkohm
R210 150K	Tolerance	No indication +5% K +10% M +20%
	Power Capacitance	No indication
	Туре	No indication . Carbon film fixed RC
R210 150K RC.1/2.K	•	ohm, carbon solid ±10%

2-2. Capacitors

	Value	No indication µF		
	Dielectric resistance	No indication 50WV (All resistances other than 50WV and those of electrolytic capactrors are indicated with WV omitted.)		
H- R210 0.01/D-	Tolerances	No indication ±108 J 55 J		
	Туре	No indication . Ceramic, general electrolytic (see circuit symbol to distinct from ceramic) MYL		
Example -				

- 3. How to Read Capacitance of Resistance-Type Capacitors and Coils
- 3-1 Capacitors

Color	Capaci- tance (a)	Multi- plier (b)	Tole- rance (c)	Characteristics (d)	
Black	0	100	<u>+</u> 20%	For temperature compensation	
Brown	1	101,			
Red	2	102	1		
Orange	3	103			
Yellow	4	104	1		
Green	5	105	1		
Blue	6	106	1		
Purple	7		}		
Gray	8		<u>+</u> 30%	High permittivity type	
White	9			For temperature compensation	
Gold			<u>+</u> 5%		
Silver			±10%		

3-2 Coils

- 4. Cautions on Use of HOS ICs
- Cautions on Use of HOS ICs
 MOS ICs are inserted in black foam for shipment. This foam is a conductor which short-circuits between the leads to prevent damage. Do not remove ICs from this foam during storage. Avoid removing ICs from this foam, placing them on plastic which is likely to be charged with static electricity or inserting them into styrol foam.
 High voltages may be applied during soldering caused by leakages from the soldering iron, so be sure to ground the tip of the soldering iron or use a low voltage soldering iron.
 The human body and clothes made of synthetic fibres or mylon gloves may be charged with several thousands volts of static electricity because of friction, so workers should be grounded.
 Be sure to ground measuring instruments such as oscilloscopes, VTWMs, etc. used for repairs.

- Measure the voltages at each section with the negative side of power supply as a reference.

The voltages in the camera section are measured with the VTR in the record mode, and those in the VTR section are measured in the record and playback modes.

* Voltages in () are in the record mode.

* One voltage value is common for recording and playback.

LEADLESS COMPONENT IDENTIFICATION

1. Leadless Transistors

The leadless transistor number is indicated by a code on its surface, using one letter, one letter and one numeral, two letters, two letters and one numeral, two numerals, two numerals, two numerals and one letter, or three letters.

	Lette	r Transistor Number	Lette	Transistor Number
	A (R) A (S) A (J) B (J) B (R) B (S) C C(R) C C(R) C C (R) C C C (R) C C C C C C C C C C C C C C C C C C C	258709 2581218R(AR) 2581765S(AR) 2581000J(AJ) 25C1621 2581001J(BJ) 25C2412AR(BR) 25C2412AR(BR) 25C2412KS(BS) 25A1122 25B999L(CL) 25871DR(CR) 25C2411R(CR) 25C2411R(CR) 25C2411R(CQ) 25C2411R(CQ) 25C2463 25R798L(DL) 25A1022 25C2619 25A1037KS(FS)	H I J K K (P) L M N (E) P (E) Q (O) R S (Q) W Y (R)	2SA1036K 2SB792 2SC2735 2SA1036

3. Leadless Resistors

Example: Code

330

561

The resistor value is indicated on the surface of the component, using a three-digit numbers, or one letter and one numeral.

(1) Identification for three digit numbers. Read this code following the same procedure as when reading the color code on discrete resistors.

Value

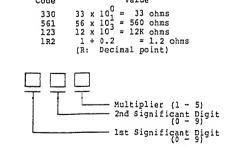

Fig. 5-8 Leadless Resistor Code

(2) Identification for one letter and one numeral.
Use this code and the following chart for component identification.

Letter	Value	Letter	Value	Letter	Value
A	1	J	2.2	S	4.7
C	1.2	L	2.7	U	5.6
E	1.5	N	3.3	W	6.8
G	1.8	Q	3.9	Y	8.2

			Yellow	A	0.1(µF)

Example:
Color Code Value
Red A 1PF
Black A 10PF

(2) Identification for one letter and one numeral.

Letter /Number	Value	Letter /Number	Value
AO HO dO fO mO nO - tO yO	1 (PF) 2 3 4 5 6 7 8 9	A2 C2 E2 G2 J2 L2 N2 Q2 S2	100 (PF) 120 150 180 220 270 330 390 470 560
Al Cl El	10 (PF) 12 15	W2 Y2	680 820
G1 J1 L1 N1 Q1 S1 U1	18 22 27 33 39 47 56	A3 E3 J3 N3 S3 W3	0.001(µF) 0.0015 0.0022 0.0033 0.0047 0.0068
AT MI	68 82	A4 E4 J4 N4 S4 U4 W4	0.01 (µF) 0.015 0.022 0.033 0.047 0.056 0.068
		A5	0.1

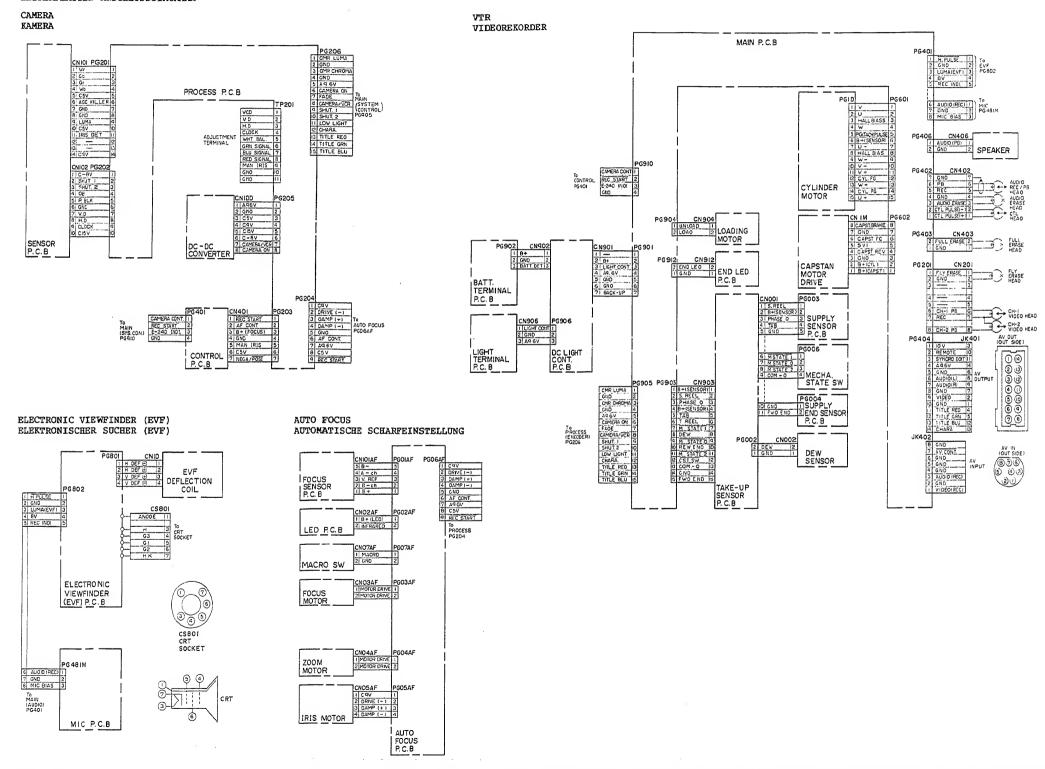

Example:
Letter Value
/Number Value
A0 1PF
A1 10PF

Leadless Jumper
 The leadless jumper is indicated as shown below.

(1) (2) (3) (4)

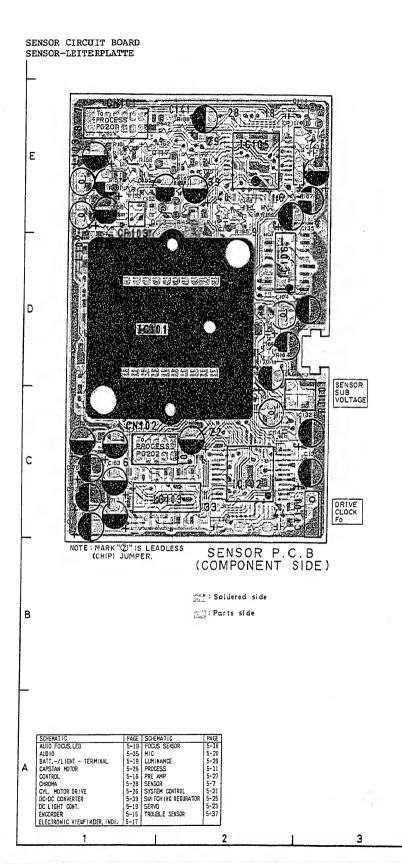

Model names VM-2300E/2380E specified in the schematic and circuit board diagrams are wrong. The correct model names are VM-2400E/2480E.
